

MULTIFUNCTIONAL MATERIALS AND STRUCTURES

S. Yarlagadda
UD-CCM

UD-CCM • 1 July 2003

Report Documentation Page				Form Approved OMB No. 0704-0188	
Public reporting burden for the collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to a penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.					
1. REPORT DATE 26 AUG 2004		2. REPORT TYPE N/A		3. DATES COVERED -	
4. TITLE AND SUBTITLE Multifunctional Materials And Structures				5a. CONTRACT NUMBER	
				5b. GRANT NUMBER	
				5c. PROGRAM ELEMENT NUMBER	
6. AUTHOR(S)				5d. PROJECT NUMBER	
				5e. TASK NUMBER	
				5f. WORK UNIT NUMBER	
7. PERFORMING ORGANIZATION NAME(S) AND ADDRESS(ES) University of Delaware Center for Composite Materials Newark, DE 19716; Bartol Research Institute				8. PERFORMING ORGANIZATION REPORT NUMBER	
9. SPONSORING/MONITORING AGENCY NAME(S) AND ADDRESS(ES)				10. SPONSOR/MONITOR'S ACRONYM(S)	
				11. SPONSOR/MONITOR'S REPORT NUMBER(S)	
12. DISTRIBUTION/AVAILABILITY STATEMENT Approved for public release, distribution unlimited					
13. SUPPLEMENTARY NOTES See also ADM001700, Advanced Materials Intelligent Processing Center: Phase IV., The original document contains color images.					
14. ABSTRACT					
15. SUBJECT TERMS					
16. SECURITY CLASSIFICATION OF:			17. LIMITATION OF ABSTRACT UU	18. NUMBER OF PAGES 15	19a. NAME OF RESPONSIBLE PERSON
a. REPORT unclassified	b. ABSTRACT unclassified	c. THIS PAGE unclassified			

Enabling Transformation of the Navy

- **Relevant Surface Platform requirements:**
 - ◆ **Autonomous Operation, Crew Reduction**
 - ◆ **Lightweight, High Performance Systems**
 - ◆ **Signature Reduction**
 - ◆ **Integrated Electric Power**
 - ◆ **Affordability**
- **Proposed Solution – “LIVE” Ship Concept**
 - ◆ **Lightweight, High Performance Multifunctional Composite Structure**
 - ◆ **Desired Functionalities: Structure, Blast, Ballistic, Fire, Network/Communications, Signature, Power, Health Monitoring, Prognostics and Repair**
- **Challenge**
 - ◆ **Develop Materials and Process Technologies that enable Modular Plug-and-Play Functionality in Composite Structure**

Navy After Next Surface Platforms

“LIVE” Ship Concept

Example: Ship Area Network (SAN)

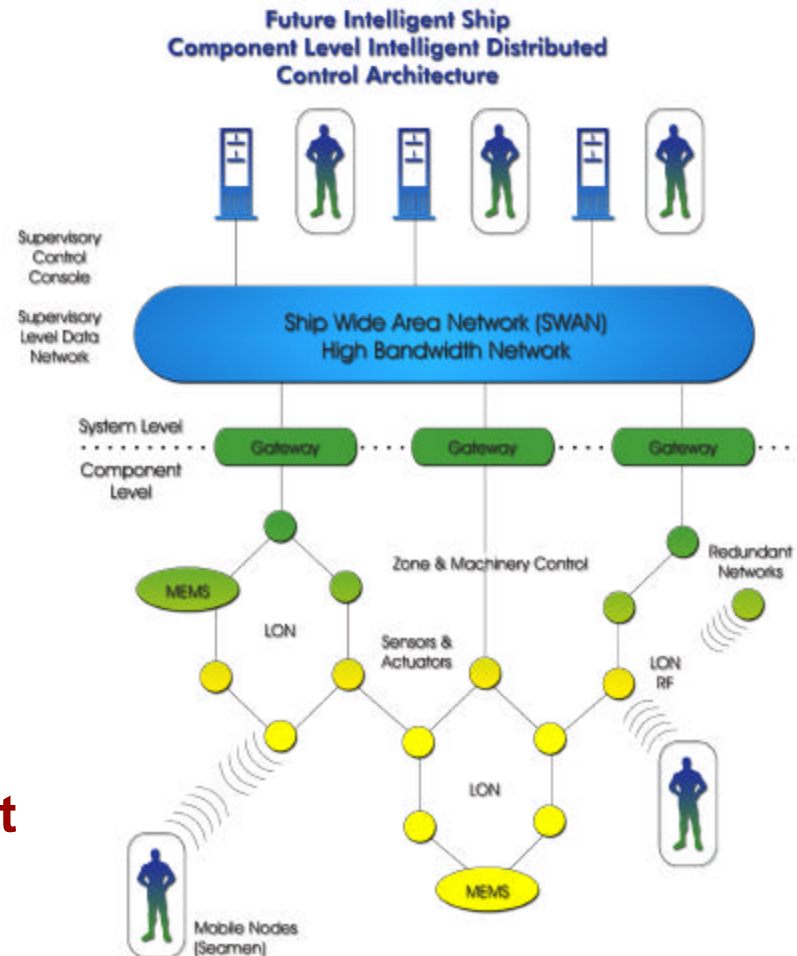

➤ “LIVE” Structure

- ◆ Self-Contained Network
- ◆ Communications, Signature, Health Monitoring, Damage Assessment
- ◆ Devices within Structure - Nodes
- ◆ Integration with WPAN

➤ Advantages

- ◆ Redundant, Reconfigurable
- ◆ Automation Capable
- ◆ Rapid Response
- ◆ Active Signature Management
- ◆ Fault Tolerant, Graceful Degradation

“LIVE” Ship Concept

➤ Meets Navy After Next Requirements

- ◆ **Next Generation Solutions for Structure, Blast, Fire and Ballistics**
- ◆ **Integrated Ship Area Network (SAN) and Autonomous Operation**
- ◆ **Reduced Crew, Flexible Architecture**
- ◆ **Active Signature Management**
- ◆ **Local Electric Power Harvesting for Self-Sufficient Systems**
- ◆ **Self-Diagnostics, Prognostics and Repair Capability**
- ◆ **Affordability**

➤ Builds on many Individual Technologies being developed by DoD/Industry

- ◆ **System Integration and Manufacturing is the Grand Challenge**
- ◆ **Technology Development, Manufacturing Methods and System Integration must occur simultaneously**

➤ Similar concepts being evaluated for other Applications (Soldier Systems)

- ◆ **Advantage for Ship Structures: Large Size and Large Surface Area!**
- ◆ **Allows integration of relatively larger systems/devices etc**

Enabling Technologies

➤ **Technologies for Multifunctional Composite Structures**

- ◆ **Electro-Optics – Communications and Signature**
- ◆ **Materials**
- ◆ **Simulation tools**
- ◆ **3-D Functionally Gradient Structures**
- ◆ **Cradle-to-Grave Sensors and Actuators**
- ◆ **Small-scale Devices (micro- to nano-)**

➤ **Manufacturing and Systems Integration**

- ◆ **Electronic Preforms**
- ◆ **Integration of enabling technologies into preforms/manufacturing**

Manufacturing Considerations

- **Manufacturing and Systems Integration Considerations**
 - ◆ **Functionality insertion through multi-scale**
 - ✧ Fibers – Electronic Preforms
 - ✧ Resins – Multi-resin Structures (Co-Injection)
 - ✧ Fillers – Multiple fillers (micro- to nano-)
 - ◆ **Constraint of Liquid Molding (VARTM/RTM) as primary manufacturing process**
 - ✧ Inserted Technologies must survive process
 - ◆ **Compliment current structural, fire, blast and ballistic capabilities**
 - ◆ **Systems Design approach rather than design for individual requirements**
 - ◆ **Affordability**
 - ◆ **Long-term durability**

Electro-Optics

➤ Next Generation

- ◆ 2-D and 3-D Photonic Crystals
- ◆ Graded Dielectrics
- ◆ Frequency Selective Surfaces
- ◆ Nanostructured Systems (aerogels, foams)
- ◆ Conductive Polymers
- ◆ Left-Handed Materials

➤ Integration into Composite

- ◆ Micro- to Nano-particulate systems
- ◆ Tailored Porous media
- ◆ Manufacturing strategies for desired composite microstructure

Example: Photonics and Metal-less Masts

- **Photonic Crystals, Graded Dielectrics and Nanostructured Materials**
 - ◆ Next generation building block material
 - ◆ Unique Tunable properties in EM spectrum
 - ◆ Networking, Communications and Signature
- **LO “Metal-less” Mast using Conductive Polymers**
 - ◆ Fluidic Antenna Concept
 - ◆ Mast structure consists of Channels/Gates Grid
 - ◆ Conductive Liquid Polymer based
 - ◆ Control Gates for Reconfigurable Geometry Antennas etc
 - ◆ Remove Polymer when not in use (LO)

3-D Functionally Gradient Structures

➤ Evaluate property-processing relationship for

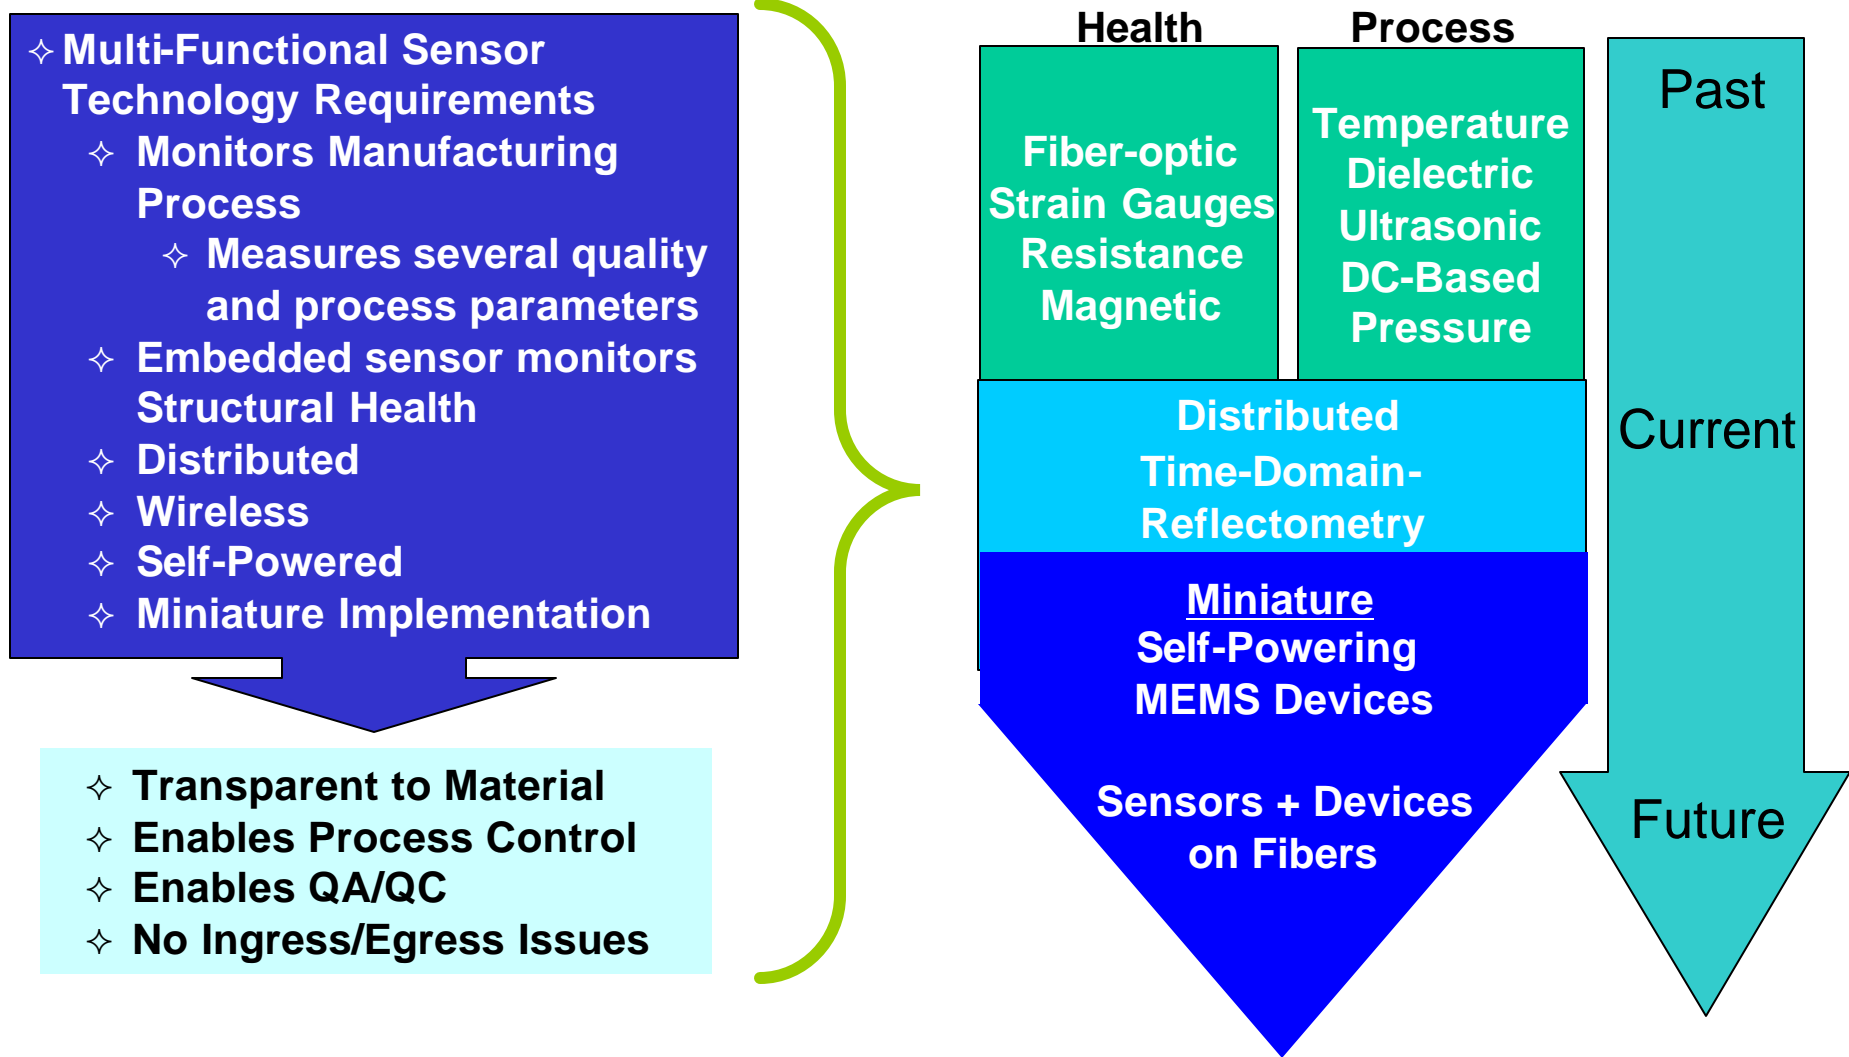

- ◆ Graded fibers, resins and fillers
- ◆ Selection based on desired functionality
- ◆ Develop design and processing guidelines

➤ Example: Particulate fillers

- ◆ Micro- to Nano-scale
 - ✧ Carbon black to nanotubes
 - ✧ Dielectrics
 - ✧ Magnetic
- ◆ Particle size – preform permeability – resin viscosity relationship
- ◆ Tailor particle composition, size, preform and resin for desired graded functionality

Cradle-to-Grave Multifunctional Sensors

Small-Scale Active Devices

- **Need Devices for**
 - ◆ **Networking – Encoders, Decoders, WDM etc**
 - ◆ **Sensors/Actuators**
 - ◆ **Energy harvesting**
- **MEMS and NEMS Technology**
 - ◆ **Passive devices**
 - ◆ **Active devices with CPU**
 - ◆ **Field Programmable**
 - ◆ **Device on fiber**
- **Integrated into Electronic Preforms**

Electronic Preforms

➤ Integrated Platform

- ◆ Electronic Textiles (E-Textile)
- ◆ Concept of Fabric Motherboard
- ◆ Large number of Active Devices
- ◆ Smart systems (Integrated CPU)
- ◆ Interconnects, System Integration

➤ Growing Industry Base

- ◆ Wearable Computing
- ◆ Medical, Fashion, Consumer Electronics

➤ Use E-Textiles as Composite Preform

- ◆ Structure goes “LIVE”
- ◆ Integration and Manufacturing Challenge

Multifunctional Composites Enable Transformation of the Navy

Combine Best of Both Worlds

New Initiatives

Passive Properties

- Strength
- Stiffness
- Toughness
- Fire-hardness
- Blast resistant
- Corrosion resistant
- LO

Active Properties

- Sensors/Actuators
- Networking and Communications
- Active LO and Signature
- Self-Healing
- Health Monitoring
- Electronics/CPU's

Manufacturing Technologies to Integrate Multifunctionality are Essential
